Professional Summary

Final-year Computer Science student at HCMUT with hands-on experience building full-stack web, mobile, and developer-tool projects. Completed an eight-week frontend internship delivering a production IELTS Listening administration module. Comfortable working across React/Next.js, TypeScript, Python, Go, REST APIs, databases, Docker, and CI/CD. Seeking an internship or junior software engineering role with strong mentorship and real product responsibility.

Education

Ho Chi Minh City University of Technology (HCMUT) - VNU

Expected Apr 2027

B.S. in Computer Science
• GPA: 3.0 / 4.0

Skills

Languages: TypeScript, JavaScript, Python, Go, SQL, HTML5/CSS3.
Frontend & Mobile: React, Next.js, React Native, Expo, Tailwind CSS, responsive UI.
Backend & Data: FastAPI, Django REST, Gin, PostgreSQL, MongoDB, REST APIs.
Engineering Tools: Git/GitHub, Docker, GitHub Actions, Sentry, Supabase, Clerk.

Experience

EyeCode Technology Solutions - Frontend Developer Intern

06/2025 - 08/2025

- Built reusable multi-step admin forms for full-test and section-level IELTS Listening authoring using Next.js, TypeScript, and Tailwind CSS.
 - Integrated create, load, detail, and edit flows with existing REST APIs, including multipart audio upload, validation, and synchronized UI state.
 - Tested the end-to-end author-view-edit workflow, improved responsive/loading/error states, and prepared admin handover documentation.
- Product: youready.net/ielts (Admin & Listening module).

Projects

OPLang Compiler Lite - Full-stack Developer

GitHub

- Integrated the compiler pipeline from lexer and parser through AST generation, static analysis, and Jasmin output behind a FastAPI facade.
- Built a React/TypeScript client with typed API handling, Monaco editing, verified examples, request cancellation, and browser persistence.
- Added isolated temporary workspaces, a 100 KiB input guard, Docker support, CI checks, and a documented no-execution security boundary.

HCMUT LostFound - Mobile Team Project

GitHub

- Developed a campus lost-and-found product using React Native/Expo, Go/Gin, PostgreSQL, Clerk, and Supabase Storage.
- Implemented authenticated posting, search/filtering, media upload, user contact flows, CI/CD, and Sentry monitoring.
- Released an APK to external testers and used survey and error data to identify reliability, notification, and trust improvements.

Matavi - EdTech Platform (In Development)

System Design

- Designed the domain model for a mathematics question bank, revisions, assets, exam versions, attempts, scoring, and import review.
- Supports multiple-choice, true/false, short-answer, math notation, diagrams, timed exams, and topic-level learning analytics.
